

CLAIM LISTING

1. (Original): A computer-implemented method comprising:
defining a set of reduced regular expressions for particular patterns in
strings; and

learning, from a training set, a knowledge base that uses the reduced regular
expressions to resolve ambiguity based upon the strings in which the ambiguity
occurs, wherein the learning includes transformation sequence learning to create a
set of rules that use the reduced regular expressions to resolve ambiguity based
upon the strings in which the ambiguity occurs.

2. (original): A computer-implemented method as recited in claim 1,
wherein the set of reduced regular expressions are defined over a finite alphabet
 Σ , wherein the alphabet is a union of multiple sets of distinct classes.

3. (original): A computer-implemented method as recited in claim 1,
wherein the training set comprises a labeled corpus.

4. (Original). A computer-implemented method as recited in claim 1,
wherein the set of reduced regular expressions specify types of patterns that are
allowed to be explored when learning from the training set.

5. (original): A computer-implemented method as recited in claim 1,
wherein the learning includes applying a set of very reduced regular expressions
that are a proper subset of the reduced regular expressions.

1
2 6. (original): A computer readable medium having computer-
3 executable instructions that, when executed on a processor, perform a method
4 comprising:

5 defining a set of reduced regular expressions for particular patterns in
6 strings; and

7 learning, from a training set, a knowledge base that uses the reduced regular
8 expressions to resolve ambiguity based upon the strings in which the ambiguity
9 occurs, wherein the set of reduced regular expressions specify types of patterns
10 that are allowed to be explored when learning from the training set.

11
12 7. (original): A computer readable medium as recited in claim 6,
13 wherein the set of reduced regular expressions are defined over a finite alphabet
14 Σ , wherein the alphabet is a union of multiple sets of distinct classes.

15
16 8. (original): A computer-implemented method as recited in claim 6,
17 wherein the training set comprises a labeled corpus.

18
19 9. (original): A computer-implemented method as recited in claim 6,
20 wherein the learning comprises transformation sequence learning to create a set of
21 rules that use the reduced regular expressions to resolve ambiguity based upon the
22 strings in which the ambiguity occurs.

1 10. (original): A computer-implemented method as recited in claim 6,
2 wherein the learning includes applying a set of very reduced regular expressions
3 that are a proper subset of the reduced regular expressions.

4
5 11. (original): A computer-implemented method comprising:
6 receiving a string with an ambiguity site;
7 applying reduced regular expressions to describe a pattern in the string,
8 wherein the reduced regular expressions:

9 are included in a knowledge base that is learned from a training set;
10 and
11 specify types of patterns that are allowed to be explored when the
12 knowledge base is learned; and
13 selecting one of the reduced regular expressions to resolve the ambiguity
14 site.

15
16 12. (original): A computer-implemented method as recited in claim 11,
17 wherein the applying includes applying a set of very reduced regular expressions
18 that are a proper subset of the reduced regular expressions.

19
20 13. (original): A computer-implemented method comprising:
21 receiving a string with an ambiguity site;
22 applying reduced regular expressions to describe a pattern in the string,
23 wherein the applying includes applying a set of very reduced regular expressions
24 that are a proper subset of the reduced regular expressions; and
25

1 selecting one of the reduced regular expressions to resolve the ambiguity
2 site.

3
4 14. (original): A computer readable medium having computer-
5 executable instructions that, when executed on a processor, perform a method
6 comprising:

7 receiving a string with an ambiguity site;

8 applying reduced regular expressions to describe a pattern in the string,

9 wherein:

10 the reduced regular expressions are included in a knowledge base

11 that is learned from a training set; and

12 the reduced regular expressions specify types of patterns that are

13 allowed to be explored when the knowledge base is learned; and

14 selecting one of the reduced regular expressions to resolve the ambiguity

15 site.

16
17 15. (original): A computer readable medium as recited in claim 14,
18 wherein the applying includes applying a set of very reduced regular expressions
19 that are a proper subset of the reduced regular expressions.

20
21 16. (original): A computer readable medium having computer-
22 executable instructions that, when executed, direct a computer to:

23 read a training set;

24 construct a graph having a root node that contains a primary position set of
25 the training set and multiple paths from the root node to secondary nodes that

1 represents a reduced regular expression, the secondary node containing a
2 secondary position set to which the reduced regular expression maps;

3 score the secondary nodes to identify a particular secondary node; and

4 identify the reduced regular expression that maps the path from the root
5 node to the particular secondary node.

6
7 17. (original): A training system comprising:

8 a memory to store a training set;

9 a processing unit; and

10 a disambiguation trainer, executable on the processing unit, to define a set
11 of reduced regular expressions for particular patterns in strings of the training set
12 and learn a knowledge base that uses the reduced regular expressions to describe
13 the strings wherein the reduced regular expressions specify types of patterns that
14 are allowed to be explored when the knowledge base is learned from the training
15 set.

16
17 18. (original): A training system as recited in claim 17, wherein the
18 training set comprises a labeled corpus.

19
20 19. (original): A training system as recited in claim 17, wherein the
21 disambiguator trainer employs transformation sequence learning to create a set of
22 rules that use the reduced regular expressions to describe the strings.

23
24 20. (original): A system comprising:
25

1 a memory to store a knowledge base that uses reduced regular expressions
2 to resolve ambiguity based upon strings in which the ambiguity occurs, wherein
3 the knowledge base is learned from a training set using the reduced regular
4 expressions, the reduced regular expressions specify types of patterns that are
5 allowed to be explored when the knowledge base is learned;

6 a processing unit; and

7 a disambiguator, executable on the processing unit, to receive a string with
8 an ambiguity site and apply a reduced regular expression from the knowledge base
9 that describes a pattern in the string to resolve the ambiguity site.
